An investigation into factors affecting the implementation of Antimicrobial Stewardship (AMS) before and during the COVID-19 pandemic in two acute care settings

The couple was admitted to the COVID-19 ICU ward.

The wife was deteriorating due to Multi-Drug Resistance (MDR) Bacteria. She was lucky, there was an antibiotic Reserved to treat her.

A tale of two pandemics - COVID-19 and Antimicrobial Resistance (AMR)

Antimicrobial Stewardship (AMS) maintains the effective and right use of antibiotics.

Be Careful

Identify factors affecting antibiotics use before and during the COVID-19 pandemic.

Provide practical ways to improve safety and quality of patient care.
